

## ABSTRACT OF THE DISCLOSURE

A thermally conductive polymer molded article formed by  
5 molding a thermally conductive composition which comprises a  
liquid crystalline polymer and thermally conductive filler  
having magnetic anisotropy, wherein the liquid crystalline  
polymer and the thermally conductive filler are oriented in  
a predetermined direction by a magnetic field. The thermally  
10 conductive composition contains 100 parts by weight of the  
liquid crystalline polymer and 5 to 800 parts by weight of  
the thermally conductive filler having magnetic anisotropy.  
The thermally conductive filler has a thermal conductivity  
in at least one direction higher than the thermal  
15 conductivity of the liquid crystalline polymer.
